Bangkok, Thailand | +66 97-227-1804 | purinat.san@gmail.com

Full-Stack Software Engineer with 5+ years of experience building scalable mobile, web, and event-driven systems across banking and enterprise domains. Specialized in **Flutter, Nuxt 3, and reactive backend development (Spring WebFlux, Kotlin)**, with hands-on experience in **Kafka-based architectures, CI/CD automation, and distributed team environments**.

WORK EXPERIENCE

PALO IT Sep 2023 - Present

Software Engineer / Full Stack Developer / IT Consultant

Delivering enterprise digital solutions across **banking, international** web platforms, and large-scale **B2B MarTech** systems

Enterprise B2B Marketing Tech Platform - Major Thai Enterprise Group (Ongoing)

- Led development of a **distributed system** handling multi-domain logic (**Gamification, Commerce, Messaging**), improving scalability and domain decoupling for **1K-50K+ daily transactions**
- Developed** features across **Gamification** (missions, ballots, challenges) and **Commerce** (campaigns, orders, packages), supporting **complex workflows** for a **large-scale MarTech platform**
- Implemented cross-domain integrations using **REST and Kafka** event-driven communication, enabling **asynchronous data flow** between services
- Built and maintained **frontend and BFF layer with Nuxt 3**, improving modularity and reducing feature delivery time by 50%
- Contributed to **reactive backend services using Spring WebFlux (Kotlin)** following Clean Architecture principles, supporting non-blocking and scalable processing. Handle high load Campaign features which range from **1,000 - 100,000**
- Designed domain-specific data models and data flows using **MongoDB and PostgreSQL**, optimizing **read/write performance by 25%** across services
- Reduced **production incidents by 10%** through improved **error handling, retry mechanisms, and async processing strategies**

Flutter Web One-Stop Service Platform - Singapore-Based Client (1 Year 3 Months)

- Developed **enterprise Flutter Web platform** for a one-stop service system used **across multiple SEA regions**
- Built **BFF layer** with **Nest.js** to aggregate and streamline backend service communication for frontend consumption
- Collaborated with **distributed teams across Asia-Pacific and Europe**, contributing to cross-regional feature delivery
- Drove cross-team alignment**, clarifying requirements and keeping delivery on track across 5 regions
- Helped shape project structure and architecture**, introducing clearer module boundaries and improving code organization for better scalability and team collaboration

Flutter Mobile Application Revamp - Thai Banking Client (1 Year)

- Revamped **legacy mobile banking application** with **Flutter**, enabling **cross-platform (iOS/Android)** and reducing fragmentation
- Drove application re-architecture**, improving **scalability, maintainability**, and enabling faster team delivery
- Implemented **CI/CD pipelines** using **Docker and Jenkins**, reducing manual deployment effort and improving release consistency
- Automated **end-to-end testing** using Given-When-Then approach, improving test reliability and **regression coverage**
- Practiced **trunk-based development** within **Agile (Scrum)** workflow to support continuous integration and delivery
- Integrated **Firebase** services and **secure backend APIs** to support real-time features and user data handling

Dek-D Interactive Co., Ltd. March 2021 - August 2023

Front-end Developer (Full-time/Internship)

- Developed and maintained high-traffic web platform with **Nuxt.js, React, and Svelte**, supporting large-scale user interactions
- Implemented performance-optimized UI and WebView integration for mobile application, improving rendering performance.
- Built responsive admin interfaces using React, Next.js, and GraphQL for internal tooling and content management
- Developed reusable components and internal tools to improve development efficiency across teams

EDUCATION

Mahidol University

May 2018 - May 2021

Bachelor of Science (Information and Communication Technology) | MUICT

Studied in Computer Software Engineering Track with **First Class Honors, GPA: 3.51**

Final Project: AiRadar - Air Quality Monitoring System (2021)

- Developed full-stack air quality monitoring platform
- Built data ingestion and visualization pipeline using Next.js, Express.js, and MongoDB
- Integrated IoT devices and deployed via DigitalOcean
- Implemented real-time tracking and notification services

SKILLS

Frontend & Mobile

- Flutter (iOS, Android, Web)
- Nuxt.js / Vue.js
- React / Next.js
- Svelte

Backend & Architecture

- Spring WebFlux (Kotlin)
- Nest.js / Express.js
- Gin (Go)
- REST APIs, Clean Architecture principles

Data & Messaging

- MongoDB, PostgreSQL
- Kafka, Redis

Tools & Cloud

- Docker, Git
- Firebase, Google Cloud, AWS, Netlify
- Jenkins, GitHub Actions

LANGUAGES

- Thai - Native Speaker
- English - Professional working proficiency (collaboration across international teams)
- TOEIC Score: 745 (2020)
- Comfortable working in international teams (English communication)
